Purpose:

The main objective of this project is to gain a comprehensive understanding of the ARP protocol, including its vulnerabilities. The aim is to explore and demonstrate practical exploits on available machines, emphasizing a hands-on approach rather than relying solely on automated tools.

Credential:

A:

Container: 4d1fb6638aa0
ipv4: 10.9.0.5

Mac: 02:42:0a:09:00:05

B:

Container: 416e7e4f78e8

Ipv4: 10.9.0.6

Mac: 02:42:0a:09:00:06

M:

Container: bbe545468be8

Ipv4: 10.9.0.105

Mac: 02:42:0a:09:00:69

Task:

Task1:

Task1A:

```
root@4d1fb6638aa0:/# arp -n
root@4d1fb6638aa0:/# arp -n
Address                 HWtype  HWaddress           Flags Mask
10.9.0.6                ether   02:42:0a:09:00:69   C
```

Task1B:

Scenario 1:

```
root@4d1fb6638aa0:/# arp -n
Address                 HWtype  HWaddress            Flags Mask        Iface
10.9.0.6                ether   02:42:0a:09:00:06    C                 eth0
root@4d1fb6638aa0:/# arp -n
Address                 HWtype  HWaddress            Flags Mask        Iface
10.9.0.6                ether   02:42:0a:09:00:69    C                 eth0
```

Scenario 2:

Likely duo to A having it's ARP table empty so he first need to do a request to accept a replay

```
root@4d1fb6638aa0:/# arp -n
root@4d1fb6638aa0:/# arp -n
```

Task1C:

Scenario 1:

```
root@4d1fb6638aa0:/# arp -n
Address                 HWtype  HWaddress            Flags Mask        Iface
10.9.0.6                ether   02:42:0a:09:00:06    C                 eth0
root@4d1fb6638aa0:/# arp -n
Address                 HWtype  HWaddress            Flags Mask        Iface
10.9.0.6                ether   02:42:0a:09:00:69    C                 eth0
```

Scenario 2:

The ARP attack didn't work because the gratuitous packet update the information already present in the ARP cache wish in this case don't exist.

```
root@4d1fb6638aa0:/# arp -n
root@4d1fb6638aa0:/# arp -n
```

Task 2:
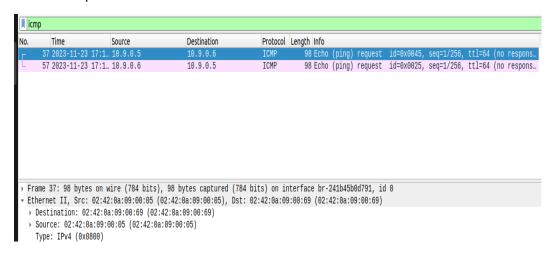

Step1:

```
root@4d1fb6638aa0:/# arp -n
root@4d1fb6638aa0:/# arp -n
Address                 HWtype  HWaddress            Flags Mask        Iface
10.9.0.6                ether   02:42:0a:09:00:69    C                 eth0
```

```
root@416e7e4f78e8:/# arp -n
root@416e7e4f78e8:/# arp -n
Address                   HWtype  HWaddress             Flags Mask            Iface
10.9.0.5                  ether   02:42:0a:09:00:69     C                     eth0
```

Step 2:

The ping was unsuccessful because we didn't have a replay and that's because the packet didn't reach A or B but instead went to M.

```
[icmp]
No.   Time                Source        Destination   Protocol Length Info
  37 2023-11-23 17:1… 10.9.0.5      10.9.0.6      ICMP       98 Echo (ping) request  id=0x0045, seq=1/256, ttl=64 (no respons…
  57 2023-11-23 17:1… 10.9.0.6      10.9.0.5      ICMP       98 Echo (ping) request  id=0x0025, seq=1/256, ttl=64 (no respons…

▸ Frame 37: 98 bytes on wire (784 bits), 98 bytes captured (784 bits) on interface br-241b45b0d791, id 0
▾ Ethernet II, Src: 02:42:0a:09:00:05 (02:42:0a:09:00:05), Dst: 02:42:0a:09:00:69 (02:42:0a:09:00:69)
  ▸ Destination: 02:42:0a:09:00:69 (02:42:0a:09:00:69)

    Type: IPv4 (0x0800)
```

Step 3:

The ping was successful and M forwarded the packet (acted like a router) wish lead to an update in the ARP table of A and B to show the M machine.

```

Welcome to Ubuntu 20.04.1 LTS (GNU/Linux 5.4.0-54-generic x86_64)

 * Documentation:  https://help.ubuntu.com
 * Management:     https://landscape.canonical.com
 * Support:        https://ubuntu.com/advantage

This system has been minimized by removing packages and content that are
not required on a system that users do not log into.

To restore this content, you can run the 'unminimize' command.

The programs included with the Ubuntu system are free software;
the exact distribution terms for each program are described in the
individual files in /usr/share/doc/*/copyright.

Ubuntu comes with ABSOLUTELY NO WARRANTY, to the extent permitted by
applicable law.

seed@a4e55f29e2b7:~$ s
```

Task3:

Netcat is used to establish communication between 2 computer (client, server) and send data or file from one host to another, the sender won't expect a replay in this case unlike telnet.

```
